

Biology: Cell Functions

1. I can identify the function of the nucleus in a cell.
2. I can identify the function of the cytoplasm in a cell.
3. I can identify the function of the cell membrane in a cell.
4. I can identify the function of the cell wall in a cell.
5. I can identify the function of the chloroplast in a cell.
6. I can identify the function of the lysosome in a cell.
7. I can identify the function of the golgi body in a cell.
8. I can identify the function of the endoplasmic reticulum in a cell.
9. I can identify the function of the vacuole in a cell.
10. I can identify the function of the ribosomes in a cell.
11. I can identify the function of the mitochondria in a cell.

Prepare for your success by reflection on how you did on the assessment:
